

Sandrini Metalli is an Italian leader in the market of metal roofing and cladding.

Founded 70 years ago as a small artisan company, it now has 4 locations between Brescia and Bergamo.

Production and warehouse cover an area of 35,000 square meters and the company can count on more than 150 employees, number in constant grow.

We can be close to every customer need in Italy and abroad thanks to the technological expertise of our team and the widespread sales network, combining so artisanal knowledge and industrial experience.

We stand out for:

**HIGH QUALITY MATERIALS**

**RAPID DELIVERY**

**WIDE RANGE OF PRODUCTS**

**COMPETITIVE PRICES**

# WORLD DRESSING METAL

**SANDactive**<sup>®</sup>  
New **sustainable** treatment

# USE LIGHT TO CLEAN AIR AND BUILDING

## Pollution Control

Products treated with SANDactive® eat smog in the surrounding air and reduce pollutant such as nitrogen oxides (NOx), fine particulate matter (PM 2,5), sulphur oxides (SOx) and volatile organic compounds (COV).

## Odor Elimination

The treatment doesn't mask odors, it breaks them down. It purifies the air; smoke, food or pet odors will be eliminated. It is in fact ideal in each architectural contest.

## Sustainability

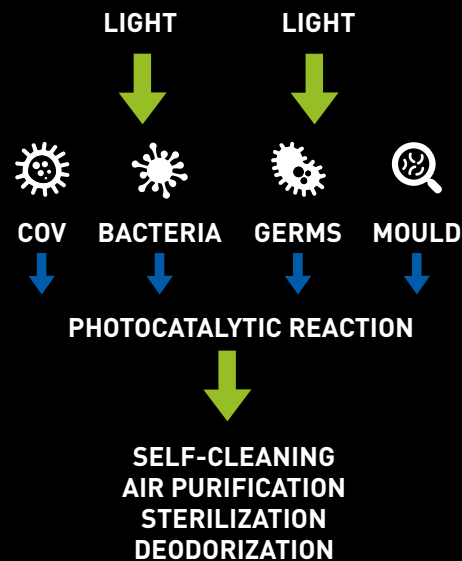

Reducing air pollutants helps reduce greenhouse gas emissions, minimizing their impact on human health and the environment and improving the overall energy efficiency of buildings.

SANDactive® is the new treatment against dirt and pollution of Sandrini Metalli developed in partnership with **pureti**™.

This innovative and sustainable treatment is ideal for façade cladding and roofing and it can be applied on all product range.

The photocatalysis is an oxidizing chemical reaction activated by solar energy. SANDactive® uses the photocatalysis to decompose the air pollutants such as NOx, SOx & COV, to improve air quality and to preserve the aesthetic appearance of materials.

SANDactive® application on Sandrini Metalli products makes them ecologically neutral and active allies of the environment.

## Self-Cleaning

Sandrini Metalli products treated with SANDactive® keep a clean look for a long time: the photocatalysis technologies break up the pollutants and preserve the surface.

## As powerful as planting trees

By applying SANDactive® on a single square metre, it is possible to achieve on Sandrini Metalli products for roof or façade the equivalent decontamination produced by a tree.

## Cost Savings

The use of products treated with SANDactive® guarantees significant savings over time in terms of labor, water and energy, helping to optimize the return on investment.
